This Event is brought to you for free and open access by the University Libraries' Events at CORE Scholar. It has been accepted for inclusion in Ohio IR Day by an authorized administrator of CORE Scholar. For more information, please contact library-corescholar@wright.edu.

Oberlin College Open Access Policy

Open Access at Oberlin College

Font size: [A](#) [A](#) [A](#)

The primary goal of the policy, which was adopted by unanimous vote of the General Faculty on November 18, 2009, is to maximize dissemination of scholarship produced at Oberlin. Compliance with the policy is easy. Upon publication of a peer-reviewed article, a faculty or A&PS author simply submits the final peer-reviewed manuscript and bibliographic information for the article using the web submission form. The author may also email the article manuscript and bibliographic information to Alan Boyd, the Scholarly Communications Officer.

The Scholarly Communications Officer and library staff will:

- check the publisher's policy to see if the article can be made openly accessible,
- communicate with the author about any incompatibilities between the college's open access policy and the publisher's policy,
- if necessary, advise the author about options for requesting a policy waiver for the article or submitting an author addendum to the publisher,
- record bibliographic information for the article in [Oberlin SHARES](#), Oberlin's open access repository, and
- deposit the article itself in the repository and make it openly accessible, if legal requirements are met.

Open Access

Open Access is the free, immediate, online availability of research articles, coupled with the rights to use these articles fully in the digital environment.

Why Open Access?

We engage and invest in research in order to accelerate the pace of scientific discovery, encourage innovation, enrich education, and stimulate the economy – to improve the public good. Communication of the results of research is an essential component of the research process; research can only advance by sharing the results, and the value of an investment in research is only maximized through wide use of its results.

Yet, too often, because of cost barriers or use restrictions, research results are not available to the full community of potential users. The Internet gives us the opportunity to bring this crucial information to a worldwide audience at virtually no marginal cost, and allows us to use it in new, innovative ways. This has resulted in a call for new framework to allow research results to be more easily accessed and used— the call for Open Access.

[Click here to learn who benefits from Open Access, including researchers, educational institutions, students, businesses, the public, and more.](#)

How Does Open Access Work?

SPARC considers the terms outlined by the Creative Common's Attribution-Only license (CC-BY) to be the standard terms for Open Access.

There are four primary mechanisms that can be used to enable Open Access:

- Last revised October 19, 2015. Version 1.5.
- Suggested short URL for this guide = bit.ly/goodoa

Preface

- This is a guide to good practices for university open-access (OA) policies. It's based on the type of policy first adopted at Harvard, Stanford, MIT, and the University of Kansas. Policies of this kind have since been adopted at a [wide variety of institutions](#) in North America, Europe, Africa, and Asia, for example, at affluent and indigent institutions, public and private institutions, research universities and liberal arts colleges, and at whole universities, schools within universities, and departments within schools.
- At the same time, the guide includes recommendations that should be useful to institutions taking other approaches.
- The guide is designed to evolve. No early version will cover every point on which good practices would be desirable or might be discernible. We plan to revise and enlarge it over time, building on our own experience and the experience of colleagues elsewhere. We welcome suggestions.
- The guide was in the works for several years before the first public version [launched](#) in October 2012. It's one small part of the larger effort described in Recommendation 4.2 of the [ten-year anniversary statement of the Budapest Open Access Initiative](#) (September 2012): Supporters of open access "should develop guidelines to universities and funding agencies considering OA policies, including recommended policy terms, best practices, and answers to frequently asked questions."
- We deliberately call our recommendations "good practices" rather than "best practices". On many points, there are multiple,
